PROFESSIONAL SUMMARY

Full-Stack Developer specializing in SaaS platforms and business operating systems, with end-to-end experience across frontend, backend, databases, APIs, authentication and role-based access control (RBAC), third-party integrations, payments, and production deployment. Delivered real-world systems in healthcare SaaS, ERP and contractor operations, marketplaces, multi-tenant platforms, invoicing and credit-sales systems, booking platforms, e-commerce, and enterprise legacy modernization (COBOL to .NET/Oracle). Focused on understanding business workflows, preserving existing working behavior, and turning systems into stable, production-ready products.

CORE TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, React, Next.js, Node.js, NestJS, Express.js, React Native, Expo

Databases & ORM: PostgreSQL, MongoDB, MySQL, SQL Server, Prisma ORM, PostGIS, Redis

Architecture & APIs: Multi-Tenant SaaS Architecture, RBAC (Role-Based Access Control), RESTful APIs, WebSockets, BullMQ / Job Queues, Microservice-style Backend Design

DevOps & Deployment: Docker, Nginx, VPS Deployment, CI/CD, Production Readiness & Environment Configuration

Payments & Integrations: Paymob, Stripe, Third-Party API Integrations, Geo-Based Pricing

Specialized Experience: Arabic/English RTL-LTR Localization, Legacy System Re-Engineering (.NET, Oracle, COBOL/ADSO), Existing Codebase Audit & Continuation

PROJECT EXPERIENCE

Sawiyaa — Healthcare SaaS Platform

Full-Stack Developer | Next.js, NestJS, Prisma, PostgreSQL, Redis, React Native/Expo, Docker | sawiyaa.com

- Built end-to-end patient and practitioner experiences on a multi-role healthcare SaaS platform, including booking, session, and video-session workflows.
- Implemented authentication and role-based access control (RBAC) with security-sensitive permission and step-up protection handling.
- Integrated Paymob payment processing and geo-based pricing/country resolution logic.
- Developed the Next.js web frontend and NestJS backend with Prisma + PostgreSQL, Redis, and Docker/Nginx/VPS deployment.
- Built the React Native/Expo mobile app and restructured mobile UX for both patient and practitioner user types.
- Delivered full Arabic/English bilingual interfaces and led production deployment and environment stabilization.

Alhussan — Saudi ERP / Contractor Business System

Full-Stack Developer | React, Node.js, PostgreSQL | alhussan.tech

- Developed an internal business operations system for a Saudi contracting company covering projects, employees, attendance, payroll, salaries/allowances/deductions, assets, and maintenance.
- Built role-based dashboards, reports, and permission structures to support day-to-day operational finance and HR workflows.

Tech ERP System — Multi-Tenant ERP for KSA Contractors

Full-Stack / Architecture | Node.js, PostgreSQL, RBAC

- Designed a multi-tenant ERP architecture targeting ~100 companies (~50 users each), with clear platform-level vs. tenant-level administration and tenant isolation.
- Structured a modular product (Core, Projects, HR, Assets, Maintenance, Finance, Payroll, Reports) with tenant-bound RBAC and company lifecycle states (Draft/Active/Suspended).

PriceMarket — Real Estate & Vehicle Marketplace

Full-Stack Developer | React/TypeScript/Vite, Node.js/Express, Prisma, PostgreSQL/PostGIS, Stripe | staging.pricemarket.net

- Built price-offer and reservation workflows for a European real estate and vehicle listings marketplace.
- Implemented transaction-side architecture including Stripe-based payment flows within the transaction scope.
- Worked with Redis/BullMQ job processing and WebSocket-based capabilities within the platform's buyer/seller flows.

Hesba — Small Business Accounting SaaS

Full-Stack Developer

- Built a SaaS platform for small businesses to manage customers, suppliers, invoices, credit sales, collections, and customer balances.
- Implemented subscription billing (15-day free trial, monthly/multi-month plans) with company admin and employee-level accounts, plus platform-level subscription administration.

ILS Legacy Re-Engineering — Enterprise .NET / Oracle Modernization

Full-Stack Developer | .NET, Oracle, React, Legacy COBOL/ADSO

- Analyzed and re-engineered legacy Supply Chain COBOL/ADSO programs (SAC Reversal, Receiving Inspection) into a modern .NET + Oracle system without changing the existing database schema.
- Recovered and documented business rules and validation behavior from authoritative legacy logic, building an extended rule catalog and historical evidence documentation.
- Designed and implemented backend/API layers for context, item identity, check, and approval workflows within the modern .NET backend against existing Oracle entities.

ADDITIONAL PROJECTS

- **Wenah** — Multi-tenant salon & beauty center booking platform with public business profiles and service management.
- **Nursery Management System** — Internal system for managing children's records, activities, and daily nursery operations.
- **Wholesale Credit Sales Desktop App** — Desktop application for wholesale traders to manage customers, suppliers, credit sales, and collections.
- **Women Bags E-commerce Store** — Storefront with product catalog, browsing, and cart/checkout experience for a fashion brand.
- **EPCA** — Public platform for a Saudi environmental association (epca.sa).
- **DevSphereX** — Company website for a software and digital business services agency (devspherex.online).

OTHER EXPERIENCE

Lamsa Agency — Creative Digital Work

- Contributed to creative/marketing agency work including social media campaign design, AI video ads and reels, motion graphics, and branding presentation for medical and educational campaigns.

LANGUAGES

Arabic — Native | English — Professional Working Proficiency
